

TrakSYS Licensing Definitions

System Definitions

The following Definitions are required [per-System...](#)

- Event Definitions
- Task Definitions
- Sample Definitions
- Function Definitions
- Transfer Definitions

Line 1

- E-Stop
- Jam
- Blocked
- Starved
- Not Scheduled

Line 2

- E-Stop
- Jam
- Blocked
- Starved
- Not Scheduled

└─ 10 Event Definitions ─┘

Historian

Tag History Definitions are not tied directly to Systems, but rather the [number of Tags](#) to be Historized.

TrakSYS Licensing Services

Logic Service

- 1st included with Core
- Can be added to spread Load
- Can be added to isolate Functionality

Historian Service

- 1st included with any Tag History Definitions
- Can be added to spread Load
- Can be added to isolate Functionality

Workflow Service

- 1st included with any Process Definitions
- Can be added to spread Load
- Can be added to isolate Functionality

Data Management Service

- Optional
- Can be added to spread Load
- Can be added to isolate Functionality

TrakSYS Licensing

Professional vs. Standard

	STD	PRO
Logic Service ¹	YES	YES
TrakSYS™ WEB Portal ¹	YES	YES
Messaging & Notification	YES	YES
Basic Business Rule Tag Logic	YES	YES
KPI Calculations (no limits)	YES	YES
Custom Property/Attribute Definitions	YES	YES
Product Attributes & Profiles	YES	YES
Job Data Capture	YES	YES
TrakSYS™ Concurrent Users (TSUs)	Add	Add
Event Definitions	Add	Add
Historian (History Tag Definitions)	Add	Add
SPC (Sample Definitions) ²	Add	Add
Task Management (Task Definitions)	NO	Add
Batch Management (Function Definitions)	NO	Add
Storage Systems (Transfer Definitions)	NO	Add
Material Management & Traceability	NO	Add
Data Management Service ¹	NO	Add
Audit (digital signatures/audit trail)	NO	Add
OPC Write Back	NO	YES
Advanced Script and API	Add	YES
Journal	Add	YES
Algorithmic Production Scheduling	NO	Add
Visual Workflow Management	NO	Add
Multi-Site Management	NO	Add

Key Points

- Standard DOES NOT include Advanced Script and API (although it can be added).
- You CANNOT add the following to Standard...
 - Task Definitions
 - Function Definitions
 - Transfer Definitions
 - Material Management
 - Data Management Service
 - Audit
 - OPC Write Back
 - Production Scheduling
 - Workflow
 - SIMS

TrakSYS Licensing

Miscellaneous

Advanced Scripting

- Enables C# Script Tags, Logic Service Script Classes, Scripting behind Page Definitions, API Access, (anything that involves C# or JavaScript).
- Included with Professional
- Option to Add to Standard

Audit

- Enables automatic tracking of all changes to configuration and data, including user interfaces for signing off on changes.
- Option to Add to Professional
- NOT Available in Standard

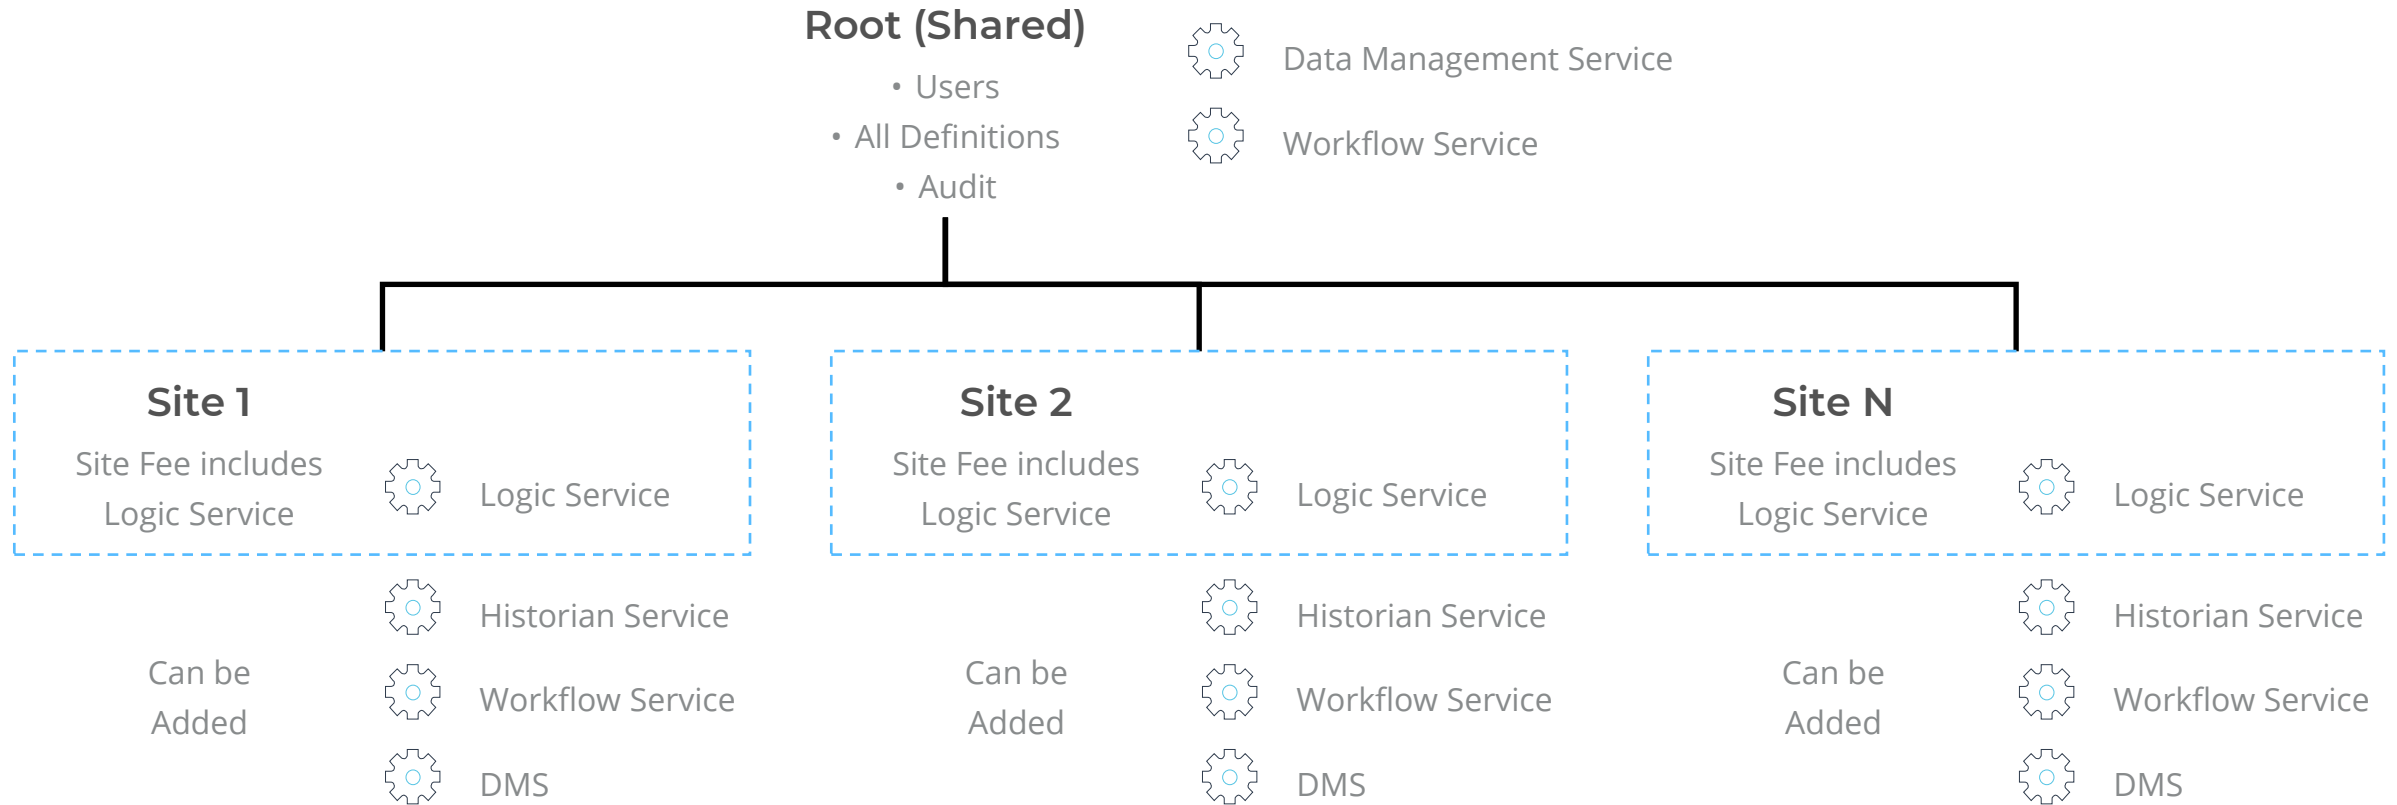

Material Management and Traceability

- Enables use of Material Definition structures and API objects.
- Access to Traceability Visualization
- Option to Add to Professional
- NOT Available in Standard

TrakSYS Licensing

SIMS

TrakSYS Licensing

SQL Server

SQL Server

TrakSYS Licensing
includes SQL Server
Standard

Parsec is a Gold/ISV Partner with Microsoft

A portion of our license fees go to Microsoft

SQL Server can only be used for TrakSYS

Includes related Extensibility within the TrakSYS Database

TrakSYS SMA includes SQL Server Maintenance

Enabled rights to upgrade to newer Versions of SQL Server

SQL Enterprise or Hosted (Azure/AWS) can be Used

Customer will be responsible for providing Licensing

TrakSYS Licensing

Cores

Core Policy Summary

- Base TrakSYS™ packages include the rights to run on a total of **4 Cores**. Each **additional** Service (Logic – beyond the included instance, Historian, Workflow, Data Management) **adds 2 Cores** to the allowance.
- Each **additional pair of Cores (2)** hosting TrakSYS™ software requires an additional license component.

Calculating Core Usage

- Identify all **servers** where a TrakSYS™ component is installed. This includes the SQL Server database, the web application server and servers hosting any TrakSYS™ service. Browser clients and devices do not count.
- For **physical servers** hosting components, **all Cores** on the server must be counted.
- For **virtual servers** hosting components, **only the Virtual Processors assigned to the VM/Hyper-V are counted** (not all the Cores on the underlying physical host server). Each Virtual Processor is counted as a **single Core**.

TrakSYS Licensing

TrakSYS Web

Manual Load Balancing

Requires Additional TrakSYS Licensing

Cluster Load Balancing

Requires Additional TrakSYS Licensing

Cluster Failover

DOES NOT Require Additional TrakSYS Licensing

Hosted Features and Runtime Limits

Hosted Features

The following features may require a **Host Name** to be associated before Activation.

- Logic Service
- Historian Service
- Workflow Service
- Data Management Service
- TS Web

Runtime Limits

The following features may contain **Runtime Limits** which limit how long the component can run without a restart.

- Logic Service
- Historian Service
- Workflow Service
- Data Management Service

Value = 1 and **Host** = Empty means that a Host must be provided before Activation

Feature	Value	Host
TrakSYS Web	1	
TrakSYS Logic Service	1	
TrakSYS Historian Service	1	
TrakSYS Data Management Service	1	

Value = .D5 means that the component will stop after 5

Feature	Value	Host
TrakSYS DEV Web	1	
TrakSYS DEV Logic Service	1.D5	
TrakSYS DEV Historian Service	1.D5	
TrakSYS DEV Data Management Service	1.D5	

Value = *, and **Host** = N/A means that components can run on any Host without Activation Binding

Feature	Value	Host
TrakSYS Partner	*,H4	N/A
