Config vs. Data Entities

General Comparison

Configuration Tables

- Describes the process and rules for data collection and operations.
- Typically contains a small number of rows.
- Sometimes referred to as Master Data.
- IS transferred with Database Transfer.

Data Tables

- The business information recorded from the process.
- Typically contains large number of rows.
- Relationally related to Configuration entities (does not include Names, Descriptions, etc...).
- NOT transferred with Database Transfer.

Config vs. Data Entities

Special Entities
